Profile

Senior Rail Operations Executive with 20+ years leading end-to-end transit operations in PPP environments. Proven at scaling service delivery from construction handover through steady-state operations, aligning asset performance, workforce, and commercial outcomes. COO-level leader experienced in operating model design, operational readiness, contract performance, and lifecycle optimization for complex rail systems.

Experience

General Manager CTSM – Eglinton Crosstown LRT
ACS Infrastructure | January 2024 – Present | Toronto, Canada

- **Led the "Trial Running" & Operational Readiness strategy**, coordinating daily with the **Operations Control Center (OCC)** to simulate full passenger timetables and stress-test the network.
- **Accountable for Service Availability**, managing the interface between Fleet/Infrastructure performance and the daily **Service Level Agreement (SLA)** targets (~98% Availability).
- **Developed "Failure Recovery" Protocols**, creating the standard operating procedures (SOPs) for rapid asset restoration during peak service hours to minimize passenger delays.
- **Directed Emergency Preparedness Drills** to validate Failure Management Scenarios and mass-casualty evacuation protocols.
- **Managed the Shadow Operations phase**, overseeing the handover of 25 stations and 19km of track from "Construction Status" to "Live Operational Status."
- **Chaired the Safety Review Board**, leading Root Cause Analysis (RCA) investigations for high-potential incidents to ensure regulatory compliance and preserve the Safety Case
- **Direct oversight of the Yard Control Centre (YCC), Helpdesk and Equipment Control Desk**, governing daily fleet mobilization and depot movements to guarantee service launch.
- **Manage contractual relationships with Metrolinx and key stakeholders**, ensuring service level agreements and operational KPIs are met.
- **Accountable for** resolving challenges related to **operational performance**.
- **Lead maintenance, and asset management** for the Eglinton Crosstown Light Rail Transit (ECLRT), ensuring system reliability, safety, and regulatory compliance.
- **Oversee a multidisciplinary team** responsible for preventive and corrective maintenance, optimizing asset lifecycle performance within budget constraints.
- **Implement process improvements and digital tools** (e.g., QFM Maintenance Management System) to enhance efficiency in work order management, reporting, and infrastructure upkeep.

BOXFISH INFRASTRUCTURE GROUP INC.
Senior Consultant /
Head of Fixed Assets OnCorr

Toronto, Canada
July 2019 - Jan 2024

- **Led the Vehicle-Infrastructure Integration** for the Eglinton Crosstown, a multi-billion-dollar urban rail system, successfully mediating technical clashes between the Fleet Manufacturer and the Construction JV to ensure compatibility.
- **Head of Fixed Assets (On-Corr Project):** Developed the asset management plan for a \$20B network upgrade, ensuring assets met regulatory codes prior to operational handover.
- **Collaborated with the incoming Operator (Deutsche Bahn)** to validate the ConOps and Service Timetable, engineering critical infrastructure upgrades at Union Station (e.g., high-speed 24m switches, double berthing, approaching speed) to resolve the network's primary capacity bottleneck
- **Delivered a highly competitive maintenance bid** (25% lower than estimates) by optimizing the maintenance risk transfer model.
- **Coordinated with Engineering & Safety** to validate that all new fixed assets (Signals, OCS, Track) were designed, manufactured and installed to specifications for safe revenue service.

BECHTEL, USA
Head O&M

July 2015 - March 2019
Toronto, Canada and Reston, US

My role involved establishing a new O&M business line globally within Bechtel Infrastructure to support development of the global PPP business and also Bechtel's Delivery Partner / construction management services business. Specifically, my role included:

- **Designed the Operating Concepts (ConOps)** for major global rail bids, defining staffing levels for **Station Operations, Drivers, and Control Room** personnel
- **Led multi-disciplinary teams** across operations, control centres, and maintenance function
- **Developed** Bechtel's **business plan and long-term strategy for O&M** within the infrastructure sector for North America, EMEA and Asia Pacific
- **Developed Risk Analysis** of new potential projects
- **Trained and built up an O&M team** to support PPP and Delivery Partner projects (e.g. operational rail modelling experts, etc.)
- **Oversaw all O&M proposals** and rail system bids, holding full profit and loss accountability for the Design-Build phase
- **Modeled Lifecycle Operational Costs**, analyzing the financial impact of headway changes, dwell times, and fleet utilization on the 30-year P&L
- **Bid and participated** in the operations readiness of the **Edmonton LRT, P3 O&M 30 years**

Key Contributions

- My lead in the rail systems integration and T&C proposal for the DBJV on the PPP Ottawa LRT was 30% below initial budget
- My lead in the OMJV's and Rail Systems bid for the PPP LRT Finch proposal was 20% below initial budget
- As Member of the execution phase Management Committee for the OMJV on the P3 Edmonton LRT Valley Line project (*March 2016 – May 2019*) we achieved the mobilization of the O&M company
- Lead for the OMJV's bid for the Gordie Howe Bridge PPP project as well as leading intelligent traffic systems and tolling systems procurement for the DBJV (*October 2016 – June 2018*). Final Proposal of Bridge Tolling System, Intelligent Traffic Control and Bridge Health System was 40% below initial budget. The O&M budget was also under initial estimate

METRO LIGERO OESTE SA.,
Maintenance Director

Sept 2006 - July 2015
Pozuelo de Alarcon, Spain

Metro Ligero Oeste is a rail PPP project forming part of Madrid metro network. I was recruited to lead the maintenance and rehabilitation phase of the project as Maintenance Director. My role included:

- **Delivered 99.5% Service Availability** across the Madrid light rail network (ML2 and ML3), directly managing the daily fleet output to meet peak-hour headway requirements.
- **Reduced Round Trip Travel Time by 10min** by reducing technical "Headway Buffers", optimizing TSP (Train Signal Priority) and increasing average speed.
- **Managed the OCC Interface for Power & Systems**, ensuring 24/7 traction power availability and real-time incident response for passenger safety.
- **Reduced "Service Affecting Incidents" by 30%**, implementing a predictive intervention strategy that prevented technical failures during revenue service hours.

Key Contributions

- **Achieved a 35% reduction** in the initial Infrastructure Maintenance Budget after implementing self-performing strategy generating significant profits for the concession.
- Developed innovative energy savings strategies, including tunnel and street lighting control, as well as tunnel ventilation control which resulted in a reduction of the energy bill of 30%.

Education

- **Executive MBA**, IESE Business School, Campus Universidad Navarra, Spain (2013) (IESE is consistently ranked within the top 3 MBA in the world by the Financial Times)
- **Executive MBA, International Lean Manufacturing Consulting**, FH Ludwigshafen, Germany (2006)
Master in Mechanics, Industrial Engineering, Polytechnic University of Valencia, Spain (2002)
